Overview

Universe Overview

A farmer owns a simple chicken coop where their chickens lay eggs for them every morning for them to sell at the market. At night, predators try to hunt and kill your chickens. The farmer recruits an army of soldier chickens and must survive until the final boss, the Demon Lion, who wishes to feast on your delicious chickens, comes and tries to take your chickens himself.

Deliverables

Target Audience	Children aged 8-15
Platform	PC
Server Size	Party of up to 4 people
Character Support	R6/R15/Custom

Objectives

Examples:

- **Base Building:** Users will need to build defenses to protect their chicken coop.
- **Economy**: Users will need to manage a limited economy, finding ways to increase money making to build more defenses to defeat the Evil Chicken King.
- **Teamwork**: Users will need to cooperate together to manage individual currency, early-game defenses, and plan strategies in order to defeat the game.

Gameplay Flow

1. Join or create a party of 1-4 players
2. Begin building defenses around the coop
3. Waves of predators begin attacking the coop
   A) As waves continue passing, different, more difficult predators start coming, with mechanics to attack or avoid defenses.
4. Chicken coop will be available to upgrade. Users can choose to:
   A) Upgrade money made per wave
   B) Add extra defense to the coop
   C) Increase base health
5. Users survive until the final wave, where the Evil Chicken King himself will try to take down the chicken coop.

Core Mechanics

User Controls

The user will use WASD to move. The user will also be given extra keybinds (not determined) to access building and troop placement.

Building

The user will be given a variety of buildings/defenses in order to increase the defensive capability of their base.

Buildings and Defenses

The user can place down defenses to attack the predators. Buildings such as walls of different strengths and traps are also available to be placed.

The defenses will be chicken themed. It will be mainly the defenses that attack predators will be manned by chickens.

Buildings will mainly consist of walls of different varieties.These walls will aim to provide a line of defense that slows predators down as they must destroy the wall. Other buildings can enhance the cost of eggs or boost defense stats.

Predators

Predators will come in waves. They seek to attack and destroy your chicken coop with your chickens. There will be two kinds of predators:

- Ground Predators – i.e. Rats, Cats, Racoons
- Flying Predators – i.e. Hawks, Owls, Eagles

Ground predators will charge towards the coop on the ground. They do not have any flying or digging capabilities but may have special abilities to bypass defenses.
Flying predators will fly over towards the coop. They can bypass defenses by flying over them. Special defenses will be required to shoot them down.

Predators may also have special abilities. These will come during middle-game rounds when the player has established a good formation of defenses. Such predators may be able to do the following:

- Squeeze through chicken wire
- Dig under walls/wire
- Jump over wires

By the time these predators arrive, the player will have established a well enough defense to take down these predators. The player will be able to afford defenses that provide solid protection for these special abilities.

In-game Currency

There will be two types of in-game currency, cash, and eggs.

Cash is used during games to purchase buildings and defenses to protect the coop. Every round will give a set amount cash, cash will also be given for killing predators.

Eggs are the premium currency earnt after a game. Depending on the round lost at, or winning the whole game, the player can earn eggs to which they can use to purchase skins for their troops or extra cosmetics.

Design Style

Art Style and Theme

Cartoon-y/simplistic art style. Farm themed

World Setting

Farm setting – Tall wheat and other crops surround the battle area where the coop resides. The battle area itself will be flat ground surrounding the chicken coop so the player can visibly see predators when they attack. A farmhouse will be visible in the distance as well as a barn to fully set the setting for the player. Atmosphere will be sunny for daytime and dark for nighttime with the moon out over the coop.

World Locations

The Farmhouse – A large modern style farmhouse with lots of land around it and some animals surrounding the outside. Flowers will decorate the house around the outside.
The Battle Area – A large flat area with a chicken coop in the middle. The area around it will consist of tall crops.

Monetization Strategy

Purchasing currency: Users may purchase **Eggs** in order to obtain cosmetics without the need to work for it. This does not include **Cash** which is used during the actual game.
